```
This represents a human protein C polypeptide having a light chain and a truncated heavy chain. The protein can be produced by standard recombinant methodologies. The truncated protein C is used to treat a wide range of thrombotic or vascular disorders or hypercoagulable states, e.g. stroke; myocardial infarction; unstable anglina; sepsis; adult respiratory distress syndrome; sickle cell anemia etc. The truncated protein C retains the activity of full-length protein C but does not undergo C-terminal cleavage, of the heavy chain, during activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polypeptide useful for treating thrombotic and vascular diseases
                                                                                 Protein C; truncated; thrombotic disorder; vascular disorder; stroke; hypercoaqulable state; myocardial infarction; unstable angina; sepsis; adult respiratory distress syndrome; sickle cell anemia; human.
                                                            Truncated human protein C polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        claim 2; Page 22-23; 23pp; English

Grinnell BW, Jones BE; Gerlitz BE,

WPI; 2001-514662/56. N-PSDB; AAD15223. Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions

Claim 1; Page 43-44; 59pp; English.

molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a infarction and unstable angina; and disease states predisposing to thrombosis; vascular occlusive disorders and hypercoagulable states e.g. thrombosis; vascular occlusive disorders and hypercoagulable states e.g. thalassaemia, sickle cell disease, viral heemorrhagic fever and permeability increasing protein; thrombotic disorders in combination with an anti-platelet agent; protein C deficiency; acute arterial with an anti-platelet agent; protein C deficiency; acute arterial or peripheral arteries or in vascular grafts in combination with a thrombotytic agent. Nuclein call grafts in combination with a containing humans with genetically predisposed prothrombotic disorders of for treating humans with genetically predisposed prothrombotic disorders or for treating humans with genetically predisposed prothrombotic disorders protein C. The invention relates to human protein C derivatives and nucleic acid

The present sequence is that of human protein C mature polypeptide. The invention relates to human protein C derivatives having at east 2 amino acid substitutions, and to recombinant DNA molecules encoding such derivatives. These derivatives have increased anticoagulant activity and resistance to inactivation by serpins activity of the wild-type human protein. Out retain the biological activity of the wild-type protein. The amino acid substitutions are selected from H100, S116, S12K, Q32E, N33D, N33F, and amino acids at collypeptide substituted with Ser, Ala, Thr, H1s, Lys, Leu, Arg, Asn, Asp, G1u, Gly or Gln. Preferred protein C derivatives are protein c polypeptide substituted with Ser, Ala, Thr, H1s, Lys, Leu, Arg, Asn, Asp, G1u, Gly or Gln. Preferred protein C derivatives are encoding the novel human protein C derivatives, transformed host encoding the novel human protein C derivatives are used of sease states predisposing to thrombosis (e.g. myocardial infarction and unstable angina), vascular occilusive myocardial infarction and unstable supers, sepsis (in combination with activatives are desired protein or with tissue factor pathway inhibitor), thrombotic disorders (in combination with an entitlement), protein C deficiency, acute arterial thrombotic catheter), protein C deficiency, acute arterial thrombotic catheter), protein C deficiency, acute arterial thrombotic certebral or peripheral arteries or in vascular grafts. Human patients with companients or in vascular genetically predisposed prothrombotic disorders may be treated by genetically predisposed prothrombotic disorders may be treated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 181 AGCCTGTGCTGCGGGCACGGCACGTGCATCGACGCATCGGCAGCTTCAGCTGCGACTGC 240

The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders.

Typercogalable states such as sepsis, disseminated intravascular coagulation, purpura fulminans, major tramam, major surgery, burns, coagulation, purpura fulminans, major tramama, major surgery, burns, thrombosis, hepatin-induced thrombocytopenia, sickle cell disease, thalassemia, viral hemorrhagic fever, thrombotic thrombocytopenic thromboty districts and hemolytic uremic syndrome, and also useful for treating infarction, unstable angina, and stroke. Protein C derivatives with infarction and substitutions result in increased resistance to inactivation by septins when compared to wild-type activated human creduire either less frequent administration and/or smaller dosage than wild type human protein C for treating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                      Protein C derivatives, useful for treating vascular occlusive disorder, hypercoagulable state, thrombotic disorder and disease states predisposing thrombosis, comprises specific amino acid substitutions -

The invention relates to a conjugate (I) comprising at least one non-compropertied moiety (II) (e.g. an N-glycosyl group) covalently attached to polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one comprising an introduced and/or at least one removed amino acid residue comprising a cattachment group for the non-polypeptide group (e.g. an N-glycosylation cattachment group included are (1) a variant (IV) of (III) comprising a site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln (C) a mucleotide sequence (Y) encoding tis/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (Y) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C); (1) and the serum half-life of a parent protein C polypeptide.

C (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) increasing (M) the functional in vivo half-compising (V) or (VI); (5) increasing (M) the functional in vivo half-compignates, and in the manufacture of medicaments for the treatment (and medicaments, and in the manufacture of medicaments for the treatment compignation (DIC); sepsis, septic thrombosis, disseminated intravascular coagulation (DIC); sepsis, septic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group

cc shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an antitrypsin. The conjugates have an increased in vivo half-life, and alpha-1 increased serum half-life, increased resistant to inhibitors, reduced conjugate offers an unmber of advantages over the currently available. The conjugate offers a number of advantages over the currently available of APC products, including longer duration between injections, cadministration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of cativated protein C) conjugates. This must be especially important when conjugate has an extended plasma life. The gene for protein C is protein C upon which the variants of the invention were based.

A claimed method for producing recombinant human protein C in the milk of a transgenic animal involves: (a) providing a DNA construct comprising DNA encoding a secretion signal and a protein C propeptide, operably linked to DNA encoding the construct of the 2 DNA sequences being linked to elements required for protein C expression in a mammary gland of a host female animal; and (b)

```
using the DNA construct to breed a transgenic animal (esp. sheep, rabbit, cattle, goat) that produces protein C in its milk, at least 90% of the protein C being in the two-chain form. Modification of the protein C two-chain cleavage site (see AAW25085) improves the maturation of recombinant protein C from single chain to two-chain form.

Human protein C or activated protein C - prepd. using expression vector capable of integration in mammalian host cell DNA WPI; 1987-081505/12. N-PSDB; AAN70102

Claim 4; Fig 4; 52pp; English.

Recombinantly produced protein C can be used to treat thrombotic disorders such as venous thrombosis as it has anti-coagulant properties. The protein sequence is thought to yield two peptide chains; the first contains the Gla domain and growth factor domains and the second (the activation peptide) contains the catalytic

New DNA encoding zymogen form of human protein C - and its activated deriv., useful as eg antithrombotic agents more sensitive to thrombin

Disclosure; page 4 - 7; 65pp; English.

This is the protein sequence of nascent human protein C encoded by the DNA of AAN90187, which is derived from cDNA clones prepd. from human liver mRNA. It comprises the following regions: residues 1-42 are the signal peptide and propeptide of human protein C, important for directing secretion and propeptide of human protein C, important for directing secretion and protein C, insolutes 43-197, once post-cranslationally modified, constitute the light chain of both two-chain zymogen and activated forms of protein C; residues the two-chain zymogen and activated forms of protein C; residues 50 be removed (on basis of homology with 50 bovine protein C) probably by a 2 step process comprising a bovine protein C) probably by a 2 step process comprising a first cleavage (either between residues 197-8 or 199-200), first cleavage (either between residues 197-8 or 199-200), followed by carboxypeptidase or aninopeptidase action, to form 2 followed by carboxypeptidase or aninopeptidase action, to form 2 chain protein C; residues 200-211 constitute the activation activated heavy chain of the 2 chain form of protein C zymogen, once 3 modified, constitute the activated heavy chain of the 2 chain form of protein C zymogen, once 3 protein C zymogen and activated heavy chain and activated he Protein C zymogen and activated protein C are regulators of haemostasis, differing from native protein C by increased sensitivity to activation by thrombin and thrombin/ thrombomodulin (even in presence of Ca ions) and longer in vivo half life. They are useful as on-demand antithrombotic agents, (replacements for heparin and hydroxycoumarins) and for treatment of hereditary protein C deficiency states.

```

```
The sequence was deduced from a clone isolated from a CDNA library prepd. from mRNA from Hep G2 cells. It is a protein C precursor, including light and heavy chains, which is cleaved to produce activated protein C (see feature table). The DNA encoding the sequence can be manipulated by genetic engineering techniques to express a protein comprising (when activated) a heavy chain and a truncated light chain comprising residues 1-149, 1-150, 1-151 or 1-10.
                                                                                                                                               Pre-pro = pre-pro peptide of protein C with all/part replaced by the corresponding peptide of either protein S, factors VII, IX or X,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 ATCTGTGACTTCGAGGAGGCCAAGGAAATTTTCCAAAATGTGGATGACACACTGGCCTTC 120

The hybrid sequence would comprise at least one lipocortin phopholipid binding domain (PBD), e.g. of PAP-I, joined to a gla-domainless protein C or activated protein C. See AAQ12680-81 for such examples. See also AAQ12678-81.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241 GGCAGCGGCTGGGAGGGCCGCTTCTGCCAGCGCGAGGTGAGCTTCCTCAATTGCTCGCTG 300

The activated protein can comprise one of 3 different truncated light chains, ADa(1) to Lys(150), Lys(151) or Arg(152). The activated HPC with a truncated light chain is more stabled during storage. It can be administered for prophylactic and/or therapeutic treatments of disease states or injuries to enhance the patient's own anti-coagulative or fibrinolytic capabilities. See also W09109951

Human protein C (AAM02600) is a zymogen of a serine protease that plays an important role in the regulation of blood coagulation and the generation of fibrinolytic activity in vivo. It is synthesised in the liver and processed to a 2-chain molecule, which is itself converted to activated protein C. Protein C activated protein C are useful in the treatment of thrombotic activated protein C are useful in the treatment of thrombotic activated protein C are useful in the protein C are useful in the treatment of thrombotic c, modified role (AAT32795) derived from Hep G2 cells. Variant protein C, modified to improve cleavage between the heavy and light chains of the circulating intermediate, can also be produced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New DNA encoding modified forms of opt. activated protein C - and related transformed cells for prodn. of recombinant protein C for use e.g. as an anti-thrombotic agent

AA232159 to AA232194 represent reference alleles for specifically claimed nucleic acid sequences from the present invention which comprise plymorphic sites as given in a table in the specification, selected from 92 single nucleotide polymorphisms in which the nucleotide at the reference allele. The nucleic acids, and primers and probes, are used to especially polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype analysis. AAV49550 to AAV49573 represent the proteins which correspond to some of the reference alleles. ```
The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and and anticoagulation activity to thrombin activation compared to wild type increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C, and retains the biological activity of the wild type human cortain C protein C derivatives are useful in the manufacture of a medicament for the treatment of acute coronary syndromes e.g. myocardial infarction and unstable angina; of acute aconary syndromes e.g. myocardial infarction and unstable angina; of disease states predisposing to infarction and unstable angina; of disease states predisposing to thrombosis; vascular coagulation (DIC), burns, transplantations, consembliate activity increasing protein; thrombotic disorders in combination of permeability increasing protein; thrombotic disorders in combination with an anti-platelet agent; protein C deficiency; acute arterial with an anti-platelet agent; protein C deficiency; acute arterial corpusation, thromboembolism or stenois in coronary, cerebral crembolytic agent. Nucleic acid molecules of the invention are useful for treating humans with genetically predisposed prothrombotic disorders corpus of the present sequence is human wild type protein C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions
                                                                                                                                              serpin inactivation; acute coronary syndrome; myocardial infarction; vascular occlusive disorder; hypercoagulable state; angina; sepsis; disseminated intravascular coagulation; DIC; burn; transplantation; sickle cell disease; viral haemorrhagic fever; protein G deficiency; haemolytic uremic syndrome; acute arterial thrombotic occlusion; thromboembolism; prothrombotic disorder; gene therapy; thalassaemia.
                                                                                                                             Human; protein C derivative; anticoagulation activity; thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure, Page 44-46; 59pp; English.

The present sequence is that of human protein C prepro-polypeptide.
The invention relates to human protein C derivatives having at least 2 amino acid substitutions, and to recombinant bNA molecules encoding such derivatives. These derivatives have increased encoding such derivatives. These derivatives have increased anticoagulant activity and resistance to inactivation by serpins activity of the wild-type human protein C but retain the biological selected from HIGO, SIIG, SIZK, G12E, N31D, N31F, and amino acids at C polypeptide substituted with Ser, Als, Thr. His, Lys, Leu, Arg, C polypeptide substituted with Ser, Als, Thr. His, Lys, Leu, Arg, C polypeptide substituted with Ser, Als Thr. His, Lys, Leu, Arg, C Asn, Asp, Glu, Gly or Gln (numbering relative to the protein C arive protein sequence). Perfected protein C derivatives are encoding the novel human protein C derivatives, transformed host C given in AAB82675-78. Also claimed are a vector comprising DNA C cells and amethod of producing the human protein C derivatives. C The protein C derivatives are useful for treating coronary consorting infarction and unstable engine), vascular occlusive consorting the human during protein c derivatives of disorders and hypercoagulable states predisposing (in rombination with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mycatulat intaiction and unstable states, sepsis (in combination with disorders and hypercoagulable states, sepsis (in combination with partericidal permeability increasing protein or with tissue factor anti-platelet agent or by local delivery through an intracoronary catheter), protein C deficiency, acute arterial thrombotic occlusion, thromboembolism, or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts. Human patients with man elementary corrections or the peripheral arteries or in vascular grafts. Human patients with

The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders, control is useful for treating vascular occlusive disorders, control is useful for treating as sepsis, disseminated intravascular protein, purpura fulminans, major tranma, major surgery, burns, coaquiation, purpura fulminans, major transplantation, deep vein adult respiratory distress syndrome, transplantation, deep vein corpuration, viral hemorrhagic fever, thrombotic thrombotycopenic thalassemia, viral hemorrhagic fever, thrombotic thrombotycopenic chrombotic disorders and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with infarction, unstable angina, and stroke. Protein C derivative human compared to wild-type activated human in acid substitutions result in increased resistance to main acid substitutions result in increased resistance to protein C. They also have longer half-lives in human blood and hence protein c. They also have longer half-lives in human blood and hence tenture either less frequent administration and/or smaller dosage than wild type human protein C for treating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein C derivatives, useful for treating vascular occlusive disorder, hypercoagulable state, thrombotic disorder and disease states predisposing thrombosis, comprises specific amino acid substitutions -

```
The invention relates to a conjugate (I) comprising at least one non-conjugated more polypeptide comprising an anino acid sequence which differs a protein C polypeptide comprising an anino acid sequence which differs comprising an anino acid sequence which differs comprising a manno acid sequence which differs comprising a compression of the non-polypeptide group (e.g. an N-glycosylation cataciment group for the non-polypeptide group (iII) comprising a tataciment group for the non-polypeptide group (iII) comprising a cataciment group for the non-polypeptide group (iII) comprising a cataciment group exposed to the surface, with the proviso that substitution in a position (P) where (P) is an anino acid with a cataciment is not Thi235sr/Ala/His/LyGn/Gnl or Pho316ser/Ala/Thr/His/LygArg/Ash/Asp/Gul/Gly/Gnl or Pho316ser/Ala/Thr/ClyGnl or Pho316ser/Ala/Thr/His/LygArg/Ash/Asp/Gul, (2) an not-cotide sequence (V) encoding cyt/302ser/Ala/Thr/His/LygArg/Ash/Asp/Gul, (2) an not-cotide sequence (V) encoding cyt/302ser/Ala/Thr/His/LygArg/Ash/Asp/Gul, (4) a host coll (VII) (3) an expression vector (VI) comprising (V) (4) a host coll (VII) (3) an expression vector (VI) comprising (VI) (4) a host coll (VII) (3) an expression vector (VI) comprising (VI) the functional in vivo half-life or the serum half-life of a parent protein c polypeptide.

Comprising (V) or (VII); (5) increasing (VI) the functional in vivo half-life or the serum half-life, increased intravascular coagulation (DIC), sepsis, septic transplantation burns, pregnancy, major sugery/trauma or adult transplantation burns, pregnancy, major sugery/traum or adult transplantation burns, pregnancy, major sugery/traum or adult transplantation burns, pregnancy, major sugery/traum or adult transplantation or burns, pregnancy, major sugery/traum or adult transplantation or less prednancy major sugery/traum or adult transplantation or less prednancy major sugery/traum or distract conjugates have an increased sector. reduced immunogenicity and volument of destroad immunogenicit

A; Description: atalyzes the proteolytic activation of prothrombin to thrombin in the A; Peathway: blood coagulation
C; Superfamily: coagulation factor X; EGF homology; Gla domain homology; trypsin homol C; Superfamily: coagulation factor X; EGF homology; Gla domain homology; trypsin homol C; Superfamily: signal sequence *status predicted <SIG>
C; Superfamily: coagulation factor X; EGF homology; Gla domain homology; trypsin homol F; 1-15/Domain: signal sequence *status predicted <SIG>
F; 16-40/Domain: gland momilogy <GILA>
F; 18-180/Product: coagulation factor X light chain *status experimental <LCH>
F; 18-14/Domain: EGF homology <EGI>
F; 183-42/Product: coagulation factor X heavy chain *status experimental <HCH>
F; 183-42/Product: coagulation factor X heavy chain *status experimental <HCH>
F; 184-47, 54, 56, 59, 60, 65, 66, 69, 72, 75, 79/Modified site: gamma-carboxyglutamic acid (Glu) F; 75, 76, 90-101, 12-111, 12-111, 12-114, 13-14, 13-14, 13-14, 12-14, 12-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 13-14, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A.Contents: annotation; sulfate binding C.Comment: Factor Xa converts prothrombin to thrombin during blood clotting. C.Comment: The two chains are formed from a single-chain precursor by the excision of C.Comment: The activation peptide is cleaved by factor IXa (in the intrinsic pathway)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 TGGTCCAAGCACGTCGACGGTGACCAGTGCTTGGTCTTGCCCTTGGAGCACCCGTGCGCC 180

A; Title: Bovine factor X.1a (activated Stuart factor). Evidence of homology with mammali
A; Reference number: Al2453; MUID:73053314; PMID:4264286
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A Molecule type: protein
A:Residues: 183-292,294-295, 'GDE', 299-334,336-348, 'AE', 351-354,356-441, 'GKFG', 446-492 <I
A:Residues: arbohydrate binding sites and disulfide bonds were determined
A:Note: carbohydrate binding sites and disulfide bonds were determined

A; Title: Activation peptide of human factor IX has oligosaccharides O-glycosidically A; Reference number: A54255; MUID: 94227047; PMID: 8172892
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R.Morita, T.; Isaacs, B.S.; Esmon, C.T.; Johnson, A.E.
